

Eclipse Neon will be used in the lab sessions. There is an older version available as well. In order to avoid confusion, rename the workspace to workspace_neon, will be prompted when Eclipse starts.

1. Create a new Java Project.

2. Name the project, leave other settings as default and click [Finish].

3. Create a new class will create the java source file as well. Click on the  button to add a new class.
4. Give the name of the new class. It will be a public class by default. For the class that performs testing, check the checkbox to include the main() method.
5. To run the application, click the  next to the run button . Choose **Run As > Java Application** from the menu.
