

UECS2344 Software Design: Lecture 8

Database Design: Mapping Entity Classes to Database Tables

Exercise A

From each of the examples given below, generate a general mapping rule that is applicable.

| Entity Classes | Database Tables | | | | | | | | | | | |
|--|-----------------|--------|---------|--|--------|---------|------|--------|------|--------|------|---------|
| <u>Example 1</u> <table><tr><td>Account</td></tr><tr><td>number</td></tr><tr><td>balance</td></tr></table> | Account | number | balance | Note: <u>primary key</u>; f.k.=foreign key Account(<u>number</u> , balance) Sample Data <table><tr><td>number</td><td>balance</td></tr><tr><td>1234</td><td>398.05</td></tr><tr><td>5678</td><td>436.70</td></tr><tr><td>1287</td><td>8555.85</td></tr></table> | number | balance | 1234 | 398.05 | 5678 | 436.70 | 1287 | 8555.85 |
| Account | | | | | | | | | | | | |
| number | | | | | | | | | | | | |
| balance | | | | | | | | | | | | |
| number | balance | | | | | | | | | | | |
| 1234 | 398.05 | | | | | | | | | | | |
| 5678 | 436.70 | | | | | | | | | | | |
| 1287 | 8555.85 | | | | | | | | | | | |

Example 2

Customer(id, name)

Sample Data

| id | name |
|-----|--------|
| 111 | Orlie |
| 222 | George |
| 333 | Shaw |

Account(number, balance, customerid)
f.k.

Sample Data

| number | balance | customerid |
|--------|---------|------------|
| 1234 | 398.05 | 111 |
| 5678 | 436.70 | 333 |
| 1287 | 8555.85 | 222 |

OR

Customer(id, name, accountNumber)
f.k.

Sample Data

| id | name | accountNumber |
|-----|--------|---------------|
| 111 | Orlie | 1234 |
| 222 | George | 1287 |
| 333 | Shaw | 5678 |

Account(number, balance)

Sample Data

| number | balance |
|--------|---------|
| 1234 | 398.05 |
| 5678 | 436.70 |
| 1287 | 8555.85 |

Example 3Customer(id, name)

Sample Data

| id | name |
|-----|--------|
| 111 | Orlie |
| 222 | George |
| 333 | Shaw |

CreditCard(number, limit, customerid)
f.k.

Sample Data

| number | limit | customerid |
|------------------|-------|------------|
| 5555111122223333 | 25000 | 111 |
| 5555666677778888 | 20000 | 333 |

Example 4Customer(id, name)

Sample Data

| id | name |
|-----|--------|
| 111 | Orlie |
| 222 | George |
| 333 | Shaw |

Account(number, balance, customerid)
f.k.

Sample Data

| number | balance | customerid |
|--------|---------|------------|
| 1234 | 398.05 | 111 |
| 5678 | 436.70 | 333 |
| 1287 | 8555.85 | 222 |
| 6677 | 446.90 | 111 |
| 5544 | 9432.00 | 222 |

Example 5Employee(emplid, name)

Sample Data

| emplid | name |
|--------|-------|
| E1 | John |
| E2 | Grace |
| E3 | Harry |

Project(projId, title)

Sample Data

| projId | title |
|--------|----------------|
| P1 | Payroll System |
| P2 | HR System |

Allocation(empId, projId)

f.k.

f.k.

Sample Data

| empId | projID |
|-------|--------|
| E1 | P1 |
| E1 | P2 |
| E2 | P1 |
| E3 | P1 |
| E3 | P2 |

Example 6

Employee

empId

name

Project

projId

title

Allocation

hoursWorked

Can be interpreted as:

Employee

empId

name

Project

projId

title

Allocation

hoursWorked

Employee(empId, name)

Sample Data

| empId | name |
|-------|-------|
| E1 | John |
| E2 | Grace |
| E3 | Harry |

Project(projId, title)

Sample Data

| projId | title |
|--------|----------------|
| P1 | Payroll System |
| P2 | HR System |

Allocation(empId, projID, hoursWorked)

f.k.

f.k.

Sample Data

| empId | projID | hoursWorked |
|-------|--------|-------------|
| E1 | P1 | 10 |
| E1 | P2 | 30 |
| E2 | P1 | 40 |
| E3 | P1 | 25 |
| E3 | P2 | 15 |

Example 7

Faculty(name, dean)

Sample Data

| name | dean |
|-------------|--------------|
| Science | Prof Andrew |
| Engineering | Prof Francis |
| Arts | Prof Janet |

Department(name, head, faculty

f.k.

Sample Data

| name | head | faculty |
|------------|----------|-------------|
| Biology | Dr Kenny | Science |
| Chemistry | Dr Jacob | Science |
| Electrical | Dr Janet | Engineering |
| Humanities | Dr Opal | Arts |

Example 8

Faculty(name, dean)

Sample Data

| name | dean |
|-------------|--------------|
| Science | Prof Andrew |
| Engineering | Prof Francis |
| Arts | Prof Janet |

Office(location, manager, faculty)

f.k.

Sample Data

| location | manager | faculty |
|----------|----------|-------------|
| A101 | Ms Agnes | Science |
| A201 | Mr David | Engineering |
| B101 | Ms Rena | Arts |

OR

Faculty(name, dean, officeLocation

f.k.

Sample Data

| name | dean | office Location |
|-------------|--------------|-----------------|
| Science | Prof Andrew | A101 |
| Engineering | Prof Francis | A201 |
| Arts | Prof Janet | B101 |

| | <p>Office(<u>location</u>, manager)</p> <p>Sample Data</p> <table> <tr> <th>location</th><th>manager</th></tr> <tr> <td>A101</td><td>Ms Agnes</td></tr> <tr> <td>A201</td><td>Mr David</td></tr> <tr> <td>B101</td><td>Ms Rena</td></tr> </table> | location | manager | A101 | Ms Agnes | A201 | Mr David | B101 | Ms Rena |
|---|---|----------|---------|------|----------|------|----------|------|---------|
| location | manager | | | | | | | | |
| A101 | Ms Agnes | | | | | | | | |
| A201 | Mr David | | | | | | | | |
| B101 | Ms Rena | | | | | | | | |
| <p>Example 9</p> <pre> classDiagram class Student { regNum name } class ForeignStudent { country } class LocalStudent { state } Student < -- ForeignStudent Student < -- LocalStudent </pre> | <p>Student(<u>regNum</u>, name)</p> <p>ForeignStudent(<u>regNum</u>, country)</p> <p>LocalStudent(<u>regNum</u>, state)</p> <p>OR</p> <p>ForeignStudent(<u>regNum</u>, name, country)</p> <p>LocalStudent(<u>regNum</u>, name, state)</p> <p>OR</p> <p>Student (<u>regNum</u>, studentType, name, country, state)</p> | | | | | | | | |

Exercise B

Given the database tables below that represent student data based on version 1, illustrate how the data will be represented in database tables based on the other 2 versions listed in Example 9.

Student

| regNum | name |
|--------|---------|
| 111 | Sally |
| 222 | Charlie |
| 333 | Mili |
| 444 | Henry |

ForeignStudent

| regNum | country |
|--------|---------|
| 222 | England |
| 333 | France |

LocalStudent

| regNum | state |
|--------|--------|
| 111 | Johor |
| 444 | Penang |

Exercise C

Given the data below that represents course and student data, design the classes and database tables needed to represent the entities and their relationships.

| course code | course title | student id | student name | grade |
|-------------|--------------|------------|--------------|-------|
| C1 | Java | 111 | Alice | A |
| C2 | PHP | 111 | Alice | B |
| C1 | Java | 222 | Bob | B |
| C2 | PHP | 222 | Bob | A |
| C1 | Java | 333 | Cindy | A |
